

## The PM Company

The PM Company is a family-owned and operated commercial real estate development company. While offering anything between real estate development, management, and services, they keep a focus on their social responsibilities and the needs of the community.

## Business Challenge

The PM Company has had their maintenance workers operating the same application for many years now, stitching in new functions and features as needed. Over time, these features, while usable, have created a less attractive user interface for the end user. The PM Company is ready to rehaul the application to use a newer technology stack with a newer UI and some brand-new features.

## Our Solution

Paradynamix would rewrite the current application in the more modern tech stack, Vue. While current features and functions would be retained, the rest of the system would be put into a new framework that provides a fluid, responsive experience. This would make it easier than ever for onsite workers to log time and actions on work orders.

### Budget

### Services

- UI/UX Design
- Custom Web App
- Content Changes and QA

### About Imagi-tech

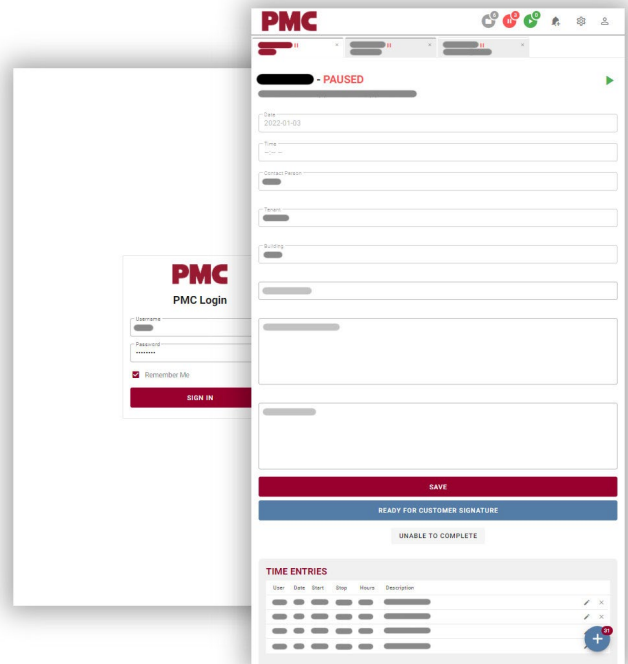

At Imagi-tech, we're a team of passionate developers and designers dedicated to helping businesses grow. From smart web apps to custom software, we solve real challenges with solutions that make a difference. With years of experience in creating user-friendly designs, building websites, and driving e-commerce success, we focus on what works best for you. Let's build something extraordinary together.

## Results

The PM Company is now running a new version of their application, with a totally rewritten user experience. The user interface is now a consistent presentation that reacts smoothly to user input and has refined some of the data entry, as requested by The PM Company.

## Core Features

- Responsive UI that adapts to the screen size.
- The ability to switch jobs on the fly.
- The ability to start and pause jobs as needed.
- Integration with a desktop application to import workorders and export time entries.

Using a custom-built framework based on the Vue technology stack, The PM Company Workorder Application has a smoother experience than ever. It's easy to select jobs, start time tracking, and switch jobs, all on their tablets.

With an ongoing maintenance contract, as needs for changes or potential bug fixes come up, The PM company has easy and ready access to a professional team to take care of the problem.
