imagi-tech

Athens Mold and Machine

Athens Mold and Machine is an American-owned and operated tire mold machining company that machine molds using 3D models created by on-staff CNC programmers, using the models to create tire molds.

Business Challenge

Athens Mold and Machine found that their current IT situation was not tenable. They had no IT department to speak of, their network security was spotty, and they didn't have any kind of plan prepared in case of a disaster. When we reached out to begin a relationship with Athens Mold and Machine, we were fortuitously able to offer our services to rectify their situation.

Our Solution

While Athens Mold and Machine knew they needed help, they were unsure of the extent of their needs. We performed an IT audit on their facility and determined that the best course of action would be to rebuild their network infrastructure from the ground up. This meant a fresh setup that could be fully documented. From there, additional needs would get addressed on a case-by-case basis, applying modern tools to solve any remaining problems. Imagi-tech would take over the role as their IT experts and advise on further action.
